The second meeting of the ADLAF working group “Latin American History in Global Perspective” will deal with the role of experts in the state-led modernization efforts of nineteenth and twentieth century Latin America.

Experts speak from a privileged site of enunciation, since, on account of their specialist knowledge, modern societies grant them authority and the capacity to judge others. Both the – often contested – social construction of the “expert” and the production of expert knowledge took place in transnational settings characterized by power asymmetries, different national academic traditions, political circumstances and multiple histories of professionalization. Latin American societies were not mere receptors of North American and European expertise. Rather, Latin American experts actively took part in transnational transfers of knowledge and external expertise was always subject to complex adaptations within local contexts.

The meeting brings together junior and senior scholars from Europe and Latin America to discuss these issues in six thematic panels. Research questions include the institutionalization of expertise in state agencies and academic centers, the struggles over social recognition of expert knowledge, modes of knowledge transfers across national and social boundaries, as well as forms of representing scientific authority in non-academic contexts.

Program

Thursday, 24 January 2013

15:30-16:00 h – Welcome Reception

16:00-16:30 h – Introductory Remarks

16:30-17:30 h – Opening Lecture Harald Fischer-Tiné (ETH Zürich): The Production of ‘Pidgin-Knowledge’ and the Making and Unmaking of Experts. Medicine in British India and beyond, c. 1800-1930

18:00-20:00 h – Panel 1: Institutionalization of Expertise. Centers of Knowledge and Nation-Building

Chair: Sören Brinkmann (Univ. Erlangen-Nürnberg)
